Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: .was tested in roasting a leg of mutton weighing 7 lbs. 12 oz., under the advice of the exhibitors. The stove was heated up to 300 in 5 minutes; using 1 cubic foot of gas. The joint was roasted for 1 hour 50 minutes, under the average temperature 355; consuming 14-4 cubic feet of gas. The joint was fairly done, except that it was underdone near the bone. (Test 73.) This stove was tested with a leg of mutton weighing 7 lbs. 2 oz. It was heated up from 58 to 350 Fahr. in 15 minutes; consuming 2-6 cubic feet of gas. The joint was roasted for 1 hour 45 minutes, at a temperature averaging 354. The gas was turned three-fourths on for all the time of roasting; and 15-9 cubic feet were consumed. The dripping caught fire several times, flaring up and scorching the joint, which was underdone near the bone. The dripping-tray used in this test was smaller than the proper one, which was missing, and allowed additional inflowway for air, making an opening 1 inch wide, all round the tray, for inflow. The door, also, was not completely closed, and admitted air at the shutting edge. (Test 74.) The stove was, therefore, tested a third time, with the dripping-tray of No. 496, and the door was properly closed. It was heated up from 58 to 358 Fahr. in 29 minutes; consuming 47 cubic feet of gas. The joint, an 8 lb. leg of...
